CATALOGUE

MACHINEFABRIEK EMCÉ B.V.

The technical data pages contains information regarding dimensions, performance, weighs, etc. Since the products are for 85% custom-built, the data should be used for guidance only. Definite data can be obtained from our sales office. EMCÉ are constantly striving to increase and further improve the product range. Whilst every effort has been made to ensure the accuracy of the dimensions and specifications included at the time of printing, we are unable to warrant the accuracy of the information. The inclusion of any product does not guarantee the availability of that product in the future. Customers should check both availability and conformance of the product to any critical parameters at the time of ordering.

Overview of the Stokvis Group	71

Company profile

HISTORY

The history of EMCÉ starts in the nineteen thirties in the Brabant province of the Netherlands. In 1933 a machine workshop was started in the village of Sprang-Capelle that also gave its name to the new company, Eerste Machine Fabriek Capelle (First Machine Factory Capelle). Very soon bigger premises were needed, and the company moved to the neighbouring town of Waalwijk. The company has been acquired by the Stokvis Group in 1983 and relocated to Voorhout in order to take full advantage of the potential group synergy. Under the wings of the Stokvis Group gradual growth in turnover, staff and premises was possible in the following years. The premises now cover over 6500 sqm of workshops, offices, and workshops with room for further expansion in the future.

PROFILE

Not only the company grew, also its products increased in dimension and complexity. As a direct result of entering the corresponding, more demanding markets and the overall increasing call for certification and project management the company raised their level of certification by obtaining the ISO 9001 (currently 9001:2015), ISO 3834-2(welding) and Lloyds 3.1 material Re-marking certification. In correspondence the number of staff members involved with "paperwork" such a design appraisals, product data sheets, project coordination, quality assurance and documentation has increased since. This enables EMCÉ to confidently offer customers at the top end of the market the equipment, documentation, certification and support they require and demand. Our 85 year history in metalworking and over half a century experience in building winches enables us to offer advanced technical solutions to our customers that are not readily available on the market.

The close cooperation within the Stokvis Group yields advanced and custom gearboxes, motors and control systems were needed, but also provides advantages of scale for larger series.

And in case you might wonder... yes, not forgetting our roots we still take pride in providing simple small and effective winches for those customers or applications that require them.

CERTIFICATION

EMCÉ is an ISO 9001-2015 and ISO 3834-2 certified company, and holds a Lloyds 3.1 Re-marking certificate.

EMCÉ advantages

EMCÉ provides high quality winches, capstans and hoisting equipment, together with services ranging from professional advice and design; through procurement, engineering and manufacture; to testing, delivery, installation and IRM.

Our mission is to exceed the quality, performance, durability and safety expectations of our customers, whether in shipbuilding, oil and gas, dredging, fishing, construction, mining, theatre or general industry.

We have identified ten key benefits to using EMCÉ:

1. Quality

We never compromise on quality, which underpins every element of our procurement and manufacturing process, workforce ethic, safety culture and customer service.

2. Standards

High standards govern the design and fabrication of every EMCÉ product, each which is certified and documented according to industry regulations, including Lloyds, DNV and ABS.

3. Expertise

Our 50 years of dedicated winch design and fabrication experience translates into genuine knowledge and understanding.

4. Innovation

We have pioneered winch design and construction based on simplicity, efficiency and reliability, creating low maintenance products that operate trouble-free for longer.

5. Flexibility

We create winches and capstans ranging from 100 kg to 100 tons with electric, hydraulic and pneumatic options and gear configurations to suit countless applications.

6. Bespoke Solutions

Our products are designed to meet your specific operating and performance conditions. Around three-quarters of our products are tailor-made.

7. In-house Capability

At EMCÉ, it's all under one roof - from the drawing office and administration, to the engineering

and testing bays. This gives us complete control of the quality and availability of resources, as well as the production process as a whole.

8. Rapid Response

EMCÉ responds quickly to new orders with rapid turnarounds even on complex projects. Naturally, our off-the-shelf catalogue offers even more immediate solutions on a daily basis.

9. Location

Headquartered close to Schiphol Airport and the port of Amsterdam, EMCÉ products are swiftly dispatched to all four corners of the world. Our international network of suppliers and service experts provides global support.

10. Price

Unit price is obviously important, but so too is reliability and the cost of maintenance. When it comes to product efficiency and the 'total cost of ownership', EMCÉ products leave others standing.

Product range

WINCHES

Our winches provide solutions for lifting, pulling, man-riding, mooring and anchoring. They range from 100 kg to 100 tons and are electrically, hydraulically or pneumatically driven - or equipped with a combination of these options. Alongside a comprehensive range of standard worm gear- and planetary-driven winches, we offer tailored solutions to suit any performance criteria and application. We also provide a complete design appraisal service and F.A.T.s for third parties, using our unique dynamic in-house test bed which is rated to 85 tons.

CAPSTANS

We provide rugged, self-contained worm gear or planetary capstan systems with electric, hydraulic or pneumatic transmission. The standard range runs to 15 tons and/or working head diameters up to 600mm and all capstans can be ATEX-rated, where required. The on-deck drive of worm gear capstans is equipped with a waterproof motor for intermittent

use, whilst the below-deck drive has a drip-waterproof motor, and a self-aligning mounting plate suitable for high static loads, such as those applied to mooring ropes.

Our planetary capstans feature a cast-iron capstan-head mounted onto a heavy-duty planetary gearbox. The whole drive is housed in a watertight tubular frame to provide optimal protection from the elements.

HOSE REELS

EMCÉ's hose reels - which range from 1 to 8 inches in diameter and up to 4 metres flange size - have applications both on and offshore, but are principally installed on heavy lift vessels, semi-submersibles, DSVs, research vessels, cable and pipe laying vessels and offshore pile-driving barges. They are usually built to order and spool hoses for fresh water, MDO fuel and hydraulic fluids, pneumatic hoses and electrical power supply cables. Our reels can be electrically, hydraulically or pneumatically driven and ATEX rated, where applicable.

PROJECTS

Over the last 50 years, EMCÉ has delivered more than 30,000 winches worldwide. But EMCÉ has also developed some of its products beyond the winch stage, for example in the creation of its proprietary Diving Launch and Recovery System - the DLR 1250 - which is used for offshore diving applications to 90 meters. Fully compliant with the requirements of EC Machinery Directives, IMCA regulations and with an ATEX certificate, the DLR-1250 is available for sale or lease.

SERVICE & REPAIR

Although we design and supply the highest quality products, regular maintenance can be critical to ensuring optimal performance, safety and regulatory compliance. Since nobody knows EMCÉ's winches better than EMCÉ itself, our specialist teams of trained experts are the best people to conduct in-house and on-site inspection, repair and maintenance work. Our supplier network also stocks the full complement of replacement parts for rapid repair, when required.

Winch terminology and components

INTRODUCTION

With numerous possible configurations of winch, we thought a brief overview of their parameters, standards and selection criteria would prove useful.

WORKING LOAD LIMIT (WLL)

WLL usually applies to the first layer of cable and decreases with each additional cable layer. The line pull is expressed in kg or daN. It is important that the working length of the cable on the drum is determined, with three additional 'safety windings' remaining on the drum at all times.

CABLE SAFETY FACTOR

Depending on the classification group of the mechanism, the exact rope safety factor (breaking strength) for lifting winches can be chosen according to ISO 4308-1. A five-fold factor is normally applied to lifting applications; three-fold for pulling winches and an eight to ten-fold factor for personnel lifting.

SPEED

The required speed of winches varies according to their purpose. In some cases, a variable speed option is required, delivered via a proportional control valve for pneumatic or hydraulic winches. For electric winches, frequency inverters are a cost-effective solution with additional technical benefits.

POWER SOURCE

EMCÉ products accommodate a range of power supply options, including electric, hydraulic and pneumatic. Should your power source be other than the one stated in this catalogue, please consult EMCÉ and our Engineering Department will recalculate the winch based on your available supply.

OPERATING ENVIRONMENT

Our winches are built to withstand a variety of challenging environmental conditions, including standard operating temperatures of 0° - 40° C. However, where more exacting conditions apply, we can build mechanisms that extend these operating parameters to suit.

BRAKES

Every lifting winch requires a fail-safe braking system. Our standard electric and pneumatic worm gear winches are self-braking, which is fine for general lifting purposes. Brake motors can also be incorporated where necessary, or we can provide mechanisms without brakes.

CONTROLS

All available winch-related controls can be incorporated into EMCÉ's products. On electric motors, a range of additional controls are available alongside the normal push buttons, direct reversing switches and remote controls (pendant or radio-controlled). These include limit switches (to stop the winch when the drum is full or empty), an electronic line pull limiter, variable speed, slack and rope detection and constant tensioning, Eexd executions etc.

Winch terminology and components

CLUTCHES

We generally use either friction or claw-type clutches, dependent on the requirement. Friction clutches can be operated under load, can compensate for differences in turning speeds between the drum and driveline and can be operated either manually or remotely. As such, they tend to be more complex and expensive than claw-type clutches which, by contrast, are simpler, more robust, dependable and inexpensive.

BAND BRAKES

Band brakes are typically used for applications where a second brake is required, such as manriding or where the static load is a multiple of the dynamic WLL. They can be provided manually or fail-safe automatically by means of a hydraulic or pneumatic cylinder.

ELECTRIC REQUIREMENTS

Ordinarily, we work with protection class IP 54 (splash watertight and dust-proof) for motors and control boxes. Pendant remote controls are IP 65 protected. Motors can also be supplied with IP 56 TENV (totally enclosed and non-ventilated), for deck equipment in marine use. We provide explosion-proof winches and spark-free motors and control boxes for use in designated zones.

CABLE GUIDES

The correct spooling of a cable on a winch drum depends on many factors, but is always desirable and beneficial for both cable storage and cable life. Selecting the right type of rope is important, but even more important is the correct distance between the winch drum and the

first sheave that together determine the so called fleet angle.

Correct cable spooling can be aided by means of a grooved drum (we do both spiral and Lebus grooves), a pressure roller or a swiveling sheave. However in all cases the fleet angle should not exceed a 0 to 2° angle on either side of the drum centre line, and then only with a grooved drum with a single cable layer.

For more extreme angles a driven spooling gear must be used that dynamically positions the cable on the drum in a continuous lateral movement along the drum.

The spooling gear may be driven by a chain from the drum, but independently driven spooling gears are also available from EMCÉ, which provide a high degree of accuracy even in multilayer applications with often thousands of metres of cable.

WINCHES

Industry

Oil & Gas

Renewables

Marine

A range of electric self-braking wormgear winches developed for heavy duty pulling and traversing duties up to 2,200 kg. Due to the self-braking wormgears the winches are suitable for pulling up a slope. A brake is available as an option for accurate positioning or repetitive lifting applications up to 1,700 kg.

Standard features

- Self-braking wormgear transmission
- IP 54 400 V AC / 3 phases / 50 Hz non-braked motor.
- Steel drum (not grooved) with cable fixing point at flange
- Single drum support (MCW 250, MCW 500)
- Two drum supports (all other models)
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class: T2-L2-M2

Available options

- Braked motor (aluminium or cast iron)
- IP 56 TENV cast iron motor for marine applications
- 220 single-phase motors (up to MCW 750)
- 24 V DC motors
- Explosion-proof motors
- Protective steel motor cover
- Manual or remotely controlled disengaging clutch
- Band brakes
- Grooved drum

- Drum pressure roller
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guards
- Emergency cranking
- Marine / offshore coating systems

Available control options

- IP 65 direct pendant remote control with emergency stop (up to 1.5 kW 220 V AC / 1 phase or 2.2 kW 400 V AC / 3 phase)
- IP 55 Control box with push-buttons and emergency stop built acc. to NEN 1010
- IP 66 Control box with low-voltage IP 65 remote control built acc. to NEN 1010
- Load limiter
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches
- Slack wire switches

Two electric self-braking wormgear winches, specially developed for car lifting purposes. The winches can be mounted on to a davit or crane boom. Winches can be used to lift cars, Zodiacs or any other non life saving craft on board of ships.

Standard features

- Self-braking worm gear transmission
- IP 56 TENV cast iron non-braked motor
400 V AC / 3 phases / 50 Hz.
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class T2-L2-M2

A range of floor-mounted manually driven winches developed for heavy duty lifting and pulling duties up to 2,620 kg. For applications where no other power source than human power is available, for example, windlasses on small barges, lifting of ramp doors on small ferries or any other industrial heavy duty job. The customer can choose for a hand wheel or crank drive system. A special safety crank with integrated centrifugal brake is available as an option for lifting duties. The maximum human force to be applied is 25 kg.

This range of standard winches can be easily adapted to customer requirements so if your specifications differ from the standard models as stated do not hesitate to send us your inquiry. We will offer you the required model accordingly.

Standard features

- Slight self-braking worm gear transmission for M 500 up to M 1000
- High-effi performance transmission for M 1500 and M 2000
- Heavy-duty industrial construction of all parts
- Manual crank or handwheel
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports
- Double layer 2-component conservation, colour RAL 5010

Available options

- Manual safety crank(s) with centrifugal brake for lifting duties
- Manual disengaging clutch
- Manual band brake
- Grooved drum
- Drum pressure roller
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guards
- Marine / offshore coating systems

A range of electric self-braking wormgear winches developed in accordance to the European standards for lifting winches specially FEM 1.001 T3-L3-M4 and DIN 15020-1AM with a long life service.

The self-braking wormgear is combined with an automatic fail-safe motor brake for precise load control.

A grooved drum is fitted as standard according to the CE standard on types EN 500 to EN 1325.

A grooved drum ensures long service life for the cable.

Standard features:

- Self-braking wormgear transmission
- IP 54 aluminium braked motor 400 VAC / 3 phases / 50 Hz.
- Grooved steel drum (not grooved on EN 200, EN 450) with cable fixing point at flange
- Single drum support (EN 200, EN 450)
- Two drum supports (all other models)
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class T3-L3-M4

Available options:

- IP 56 TENV cast iron motor for marine applications
- 220 V AC single-phase motors (up to EN 500)
- 24 V DC motors
- Explosion-proof motors
- Protective steel motor cover
- Drum pressure roller
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guards
- Emergency cranking
- Marine / offshore coating systems

Available control options:

- Direct pendant remote control IP 65 with emergency stop (up to 1.5 kW 220 VAC / 1 phase or 2.2 kW 400 VAC / 3 phase)
- IP 55 Control box with push-buttons and emergency stop built acc. to NEN 1010
- IP 66 Control box with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg WLL)
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches
- Slack wire switches

EN 1325	190	178	320	250	155	710	260	470	200	20	15	220	150	510	525	180	410	360	17

A range of hydraulic self-braking wormgear winches developed for heavy duty lifting and pulling applications up to 2,500 kg. Due to the modular concept and the flexibility of our production it is possible to build, with short delivery times, many variations of these winches such that they may be adapted to your specific needs. The types H 500 and H 700 are constructed without a brake and are designed to be totally self-braking. The types H 1200 to H 2500 are designed with a fail-safe brake and brake valve.

Standard features:

- Wormgear transmission
- Orbitmotor
- Steel drum (not grooved) with cable fixing point at flange
- Single drum support (H 500)
- Two drum supports (all other models)
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- Brake and double acting brake valve (not on H 500 and H 700)
- FEM / ISO class T3-L2-M3

Available control options:

- Proportional control valves
- Hydraulic power packs

Available options:

- Manual disengaging clutch
- Band brakes, manual or automatic fail safe
- Grooved drum
- Drum pressure roller
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guard
- Emergency cranking
- Marine / offshore coating systems

Winch type	WLL 1 st layer kg	WLL 3 rd layer kg	Recomm. Rope diam. mm	Speed 1 st layer m/min.	Drumcap. 1 st layer m	Drumcap. 3 rd layer m	Pressure drop in bar	Flow in l/min.

This range of explosion-proof winches provides the solution for pneumatic winch applications demanding lightweight construction. The use of vane type motors and inherently safe self-braking wormgears ensures trouble-free operation and low maintenance. These winches find their use in general industry, oil and gas exploration, and in many places where compact, explosion-proof hoisting gear is required.

The range includes two fast speed types, the LV 256 and LV 508, which also have optional carrying handles, and slower speed types up to 1700 kg of lifting capacity.

The self-braking properties of the wormgear drive combined with closed ports is sufficient for almost all hoisting purposes. An additional brake may be necessary for accurate positioning of a load. Please consult the factory in this case.

Standard features

- Self-braking wormgear transmission
- Rotary vane motor
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class T3-L2-M3

Available control options

- Proportional local or remote control valve
- Pneumatic limit switch
- Pneumatic slack wire switch

Available options

- Manual disengaging clutch
- Band brake, manual or automatic fail-safe
- Grooved drum
- Drum pressure roller
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guard
- Emergency cranking
- Marine / offshore coating systems

Personnel lifting winches are mainly built to client specifications and can be executed with a self-braking worm-, helical- or planetary gear depending on the load required. The drive can be either electric, hydraulic or pneumatic. EMCÉ has supplied manriding systems up to a working load limit of 10,000 kg.

EMCÉ have supplied winches for the following applications:

- safety harness or a boatswain's chairs
- diving frame applications
- baskets or platforms
- cable way rescue winches

As safety is most important with personnel lifting applications a third party design review is often required. The type of design review is however very much depending on the local rules and regulations. For onshore personnel lifting applications within the European Union often a EC type examination is required. Offshore personnel lifting winches often require the same class as the ship or rig they are being used on. Most common classifications for offshore personnel lifting winches are LRS, ABS, DNV and GL.

All the above classification agencies have different rules and regulations. Therefore it's very important that we are informed about the required classification in order to offer the correct winch to you. Furthermore details about the application are required to determine the required technical specifications.

Prices and drawings are available upon request. Please let us have your specifications.

Standard features

- Selfbraking worm-, helical or planetary gear transmissions
- Electric 400 V AC / 3-phases / 50 Hz motor.
- Hydraulic orbit, radial piston or axial piston motors
- Pneumatic gear or radial piston motors
- Primary brake on motor
- Secondary brake on winch drum
- Full material trace-ability (3.1 – EN 10204) on structural steel components
- Two drum supports
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010

Available control options

- electric /hydraulic or pneumatic control systems
- Limit switches
- Slack wire witches
- Overload protection
- Emergency hand crank

Available options

- Explosion-proof motors
- Protective steel motor cover
- Drum pressure roller
- Drum guard
- Marine / offshore coating systems
- Spooling gear
- Grooved drum
- Split drums / additional rope anchors / etc.
- Third party design review (LRS, ABS, DNV, etc)

MR 30 FLG

150 KG DEDICATED PNEUMATIC MANRIDING WINCH. FOR OFFSHORE APPLICATIONS SUPPLIED WITH LRS, ABS, DNV DESIGN APPROVAL. FOR ONSHORE APPLICATIONS SUPPLIED WITH CE TYPE EXAMINATION CERTIFICATE.

SB 307/185 EVSP

650 KG EEXD ELECTRIC PERSONAL BASKET WINCH FOR GASHOLDER (POSCO, SAARSTAHL, ARCELOR) SUPPLIED WITH EC TYPE EXAMINATION CERTIFICATE

OHR 3.0 BD

3 TON HYDRAULIC DIVING BELL AND CLUMP WEIGHT WINCH WITH LRS DESIGN APPROVAL.

OHR 3.0 BDGP

3 TON HYDRAULIC PERSONAL LIFTING WINCH FOR MAINTENANCE BASKET. SUPPLIED WITH DNV DESIGN APPROVAL AND CE TYPE EXAMINATION CERTIFICATE

SB315R HBDGL

11,5 TON HYDRAULIC DIVING BELL WINCH WITH GL DESIGN APPROVAL

OMR 3.0 LPR6 BD

3 TON PNEUMATIC DIVING BELL AND CLUMP WEIGHT WINCH WITH LRS DESIGN APPROVAL

A range of compact lifting and pulling winches utilising electric or hydraulic motors.

The heavy duty planetary gearbox is located within the drum core, which both saves space and protects the gearbox from any external mechanical threats.

Capacities can go up to 30 tons of lifting capacity with this range. Depending on your power source and application, we can select and offer the correct model for you.

Standard features

- Heavy duty planetary gearbox
- SC E IP 54 400 V AC / 3-phases / 50 Hz braked motor
- SC H; orbit or radial piston type hydraulic motor complete with brake valve
- Steel drum with cable fixing point at flange
- Two drum supports
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class: T4-L3-M5

Available options

- IP 56 TENV cast iron motor for marine applications
- Explosion-proof motors
- Protective steel motor cover
- Drum pressure roller
- Band brakes (manual or fail-safe automatic)
- Manually disengaging clutch

- Alternative speeds
- Alternative supply voltages
- Drum guards
- Spooling gears
- Grooved drums
- Marine / offshore coating systems

Available control options

- Control box IP 55 with push-buttons and emergency stop built acc. to NEN 1010
- Control box IP 66 with low-voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg WLL.)
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches (electric)
- Flange encoder
- Slack wire switches (electric)
- Proportional local or remote control valve (hydraulic)

The Standard build SB winch celebrates its 40 years in production this year. Over the years it has become an archetypal winch that can be found in the inventory of many users, rental fleets and catalogues. Sturdy, effective and economical to produce, the SB winches found many customers around the world in as many applications. Over the years SB winches gained hydraulic and pneumatic motors, clutches, band brakes and spooling gears, ATEX versions and versions than can work at arctic temperatures or in the high ambient temperatures found steel mills or kilns.

Advanced and more energy efficient motors and controls make sure the SB series conforms to modern day expectations regarding the environment and total cost of ownership. As ever the SB series remains a highly adaptable and efficient winch platform that can be modified and adapted to fit almost any customer demand of ambition.

Standard winch features

- Heavy duty planetary gearbox
- SB E; IP 54 400 V AC / 3-phases / 50 Hz braked motor
- SB H; orbit or radial piston type hydraulic motor complete with brake valve
- SB LPR; radial piston type air motor complete with hand control valve and mufflers
- SB LG; gear type air motor complete with hand or remote control valve and mufflers
- Steel drum with cable fixing point at flange
- Two drum supports
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class: T3-L3-M4

- Alternative supply voltages
- Drum guards
- Spooling gears
- Grooved drums
- Manual emergency crank
- Slip ring mounting
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Warping head
- Marine / offshore coating systems

Available control options

- Control box IP 55 with push-buttons and emergency stop built acc. to NEN 1010
- Control box IP 66 with low-voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg WLL)
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches (electric, pneumatic)
- Slack wire switches (electric, pneumatic)
- Proportional local or remote control valve (pneumatic or hydraulic)

Available winch options

- IP 56 TENV cast iron motor for marine applications
- Explosion-proof motors
- Protective steel motor cover
- Drum pressure roller
- Band brakes (manual or fail-safe automatic)
- Manual disengaging clutch
- Alternative speeds

SB 310 H INCLUDING PROPORTIONAL CONTROL VALVE
AND FILTER UNIT

SB 310 HDPS

SB 310 HDPS INCLUDING DRUM GUARD, PRESSURE ROLLER,
SPOOLING GEAR AND PROPORTIONAL CONTROL VALVE

SB 306 GP16P

SB 306 GP16P INCLUDING PRESSURE ROLLER, AIR SERVICE
UNIT AND OFFSHORE FRAME

Specially designed for applications where space is at a premium, these compact and lightweight lifting winches are ideally suited for installation on cranes, davits and derricks. The single drum support enables the rope to leave the drum at any angle. The heavy duty planetary drive is partly located within and protected by the drum core. The large drum diameters ensure a healthy drum to cable diameter ratio and a sufficient working length despite the short drums.

Standard features

- Heavy duty planetary gearbox
- FD E; IP 54 400 V AC / 3-phases / 50 Hz braked motor
- FD H; orbit or radial piston type hydraulic motor complete with brake valve
- FD GP gear type air motor complete with hand control valve and mufflers
- Steel drum with cable fixing point at flange
- Single drum support
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class: T4-L3-M5

- Alternative speeds
- Alternative supply voltages
- Drum guards
- Marine / offshore coating systems
- Tubular offshore frame construction with lifting eyes

Available control options

- Control box IP 55 with push-buttons and emergency stop built acc. to NEN 1010
- Control box IP 66 with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg WLL)
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches
- Slack wire switches
- Radio / Infra red remote control

Available options

- IP 56 TENV cast iron motor for marine applications
- Explosion-proof motors
- Protective steel motor cover
- Drum pressure roller

A range of standard hydraulic planetary winches, developed for heavy duty lifting and pulling applications of up to 10,000 kg where compactness is required. Due to the standard design, they can be supplied within short delivery times. All winches are fitted with a brake as standard that makes them suitable for lifting applications.

Standard features

- Planetary transmission
- Orbit motor
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports
- Single layer of primer only, colour black
- Brake and single acting brake valve

Available control options

- Proportional control valves
- Hydraulic power packs
- Electric lower limit switch
- Load limiter

Available options

- Grooved drum
- Drum pressure roller
- Drum guards

A comprehensive range of standard winches with a high performance gearbox developed for heavy duty pulling and lifting duties of up to 2,700 kg. This broad range comprises a variation of very compact winches and each type is standard available with a choice of 3 different speeds. Drum lengths can easily be adapted to customer requirements.

Standard features

- High efficiency transmission
- IP 54 400 V AC / 3-phases / 50 Hz braked motor
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports (all other models)
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class: T3-L3-M4

Available options

- IP 56 TENV cast iron motor for marine applications
- 230 VAC single-phase motors (up to 1.8 kW)
- 24 V DC motors
- Hydraulic motors
- Explosion-proof motors
- Manual or remotely controlled disengaging clutch
- Protective steel motor cover
- Band brakes

- Grooved drum
- Motor position vertically up
- Drum pressure roller
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guards
- Marine / offshore coating systems

Available control options

- Control box IP 55 with push-buttons and emergency stop built acc. to NEN 1010
- Control box IP 66 with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches
- Slack wire switches

The standard build SR type winch is the basis of the solution to many pulling and lifting winch applications. The winch is constructed with a slew ring in a combination with 3 or more planetary drives and motors. Capacities can go up to 75 tons of lifting capacity with this range.

Although the name of this winch indicates different, these winches are very suitable to suit your specific winch application. Several options can be offered on these highly versatile winches. Prices and drawings will be supplied upon request.

Standard winch features

- Heavy duty slew ring
- Heavy duty planetary gearboxes fitted with pinions
- SR E IP 54 400 V AC / 3-phases / 50 Hz braked motors
- SR H orbit or radial piston type hydraulic motor complete with brake valve
- Steel drum with cable fixing point at flange
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- FEM / ISO class: T3-L3-M4

- Warping head
- Marine / offshore coating systems
- Tubular offshore frame with lifting eyes

Available control options

- Control box IP 55 with pushbuttons and emergency stop built acc. to NEN 1010
- Control box IP 66 with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg WLL)
- Frequency inverter for speed control
- Wireless radio remote control systems
- Limit switches
- Slack wire switches
- Proportional local or remote control valve

Available winch options

- IP 56 TENV cast iron motors
- Explosion-proof motors
- Protective steel motor cover
- Band brakes (manual or fail-safe automatic)
- Alternative speeds
- Alternative supply voltages
- Drum guards
- Spooling gears
- Grooved drums
- Slip ring or swivel mounting
- Alternative drum dimensions / split drums / additional rope anchors / etc.

Traction winches are mainly built for purpose. Winches are built to order and can be executed with a self-braking wormgear or planetary gear depending on the load required. The drive can be either electric, hydraulic or pneumatic. The winches are mainly used for traversing applications where a compact but heavy duty system is required.

EMCÉ has supplied systems up to and including 10,000 kg.

We have supplied solutions for the following opening and closing of hangar doors, moving railcars along a track, deep sea research and moving trolleys on a cable or at ground. Systems can be supplied with endless cables or with a separate wire spooling unit.

Prices and drawings are available upon request. Please let us have your specifications.

Standard features

- Selfbraking wormgear or planetary gear transmissions
- IP 54 400 V AC / 3-phases / 50 Hz non braked motor. (440 / 3 / 60)
- Steel sheaves
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010

Available options

- Braked motor (aluminium or cast iron)
- IP 56 TENV cast iron motor for marine applications
- 220 single-phase motors (up to 1.5 kW)
- Explosion-proof motors
- Protective steel motor cover
- Manual or remotely controlled disengaging clutch

- Alternative speeds
- Protective guards
- Marine / offshore coating systems

Available control options

- Direct pendant remote control IP 65 with emergency stop (up to 1.5 kW 220 V AC / 1-phase or 2.2 kW 400 V AC / 3-phases)
- Control box IP 55 with push-buttons and emergency stop built acc. to NEN 1010
- Control box IP 66 with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter
- Frequency inverter for variable speed control
- Wireless radio remote control systems
- Limit switches

Marine

A range of compact lifting and pulling air winches specially designed for offshore applications or for any other hazardous environment where space is limited.

The heavy duty planetary gearbox is mounted within the drum core, which both saves space and protects from any external damage. Winches designed to meet independent third party requirements such as Lloyds, ABS, etc. These standard winches can be fitted with several options and accessories. Two of the winches are manriding prepared.

Standard features

- OAW: utility lifting
- OMR: manriding prepared
- OAW/OMR GP: contact less maintenance free gear motor including (biased) throttle valve
- Heavy duty planetary gearbox integrated in gearbox
- Exhaust silencing mufflers
- Cable fixing point at flange
- Two drum supports
- Standard temperature range -10° to +40°C
- Automatic disc brake
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 1023
- FEM / ISO class: T4-L3-M5

- Drum dividers
- Band brakes (manual or automatic failsafe)
- Manual disengaging clutches (only allowed for pulling applications)
- Spooling gears
- Grooved drums
- Manriding package
- Third party certification (LRS, ABS, etc)
- ATEX Certificate

Available control options

- Emergency main shut-off valves
- Load limiters
- Limit switches (pneumatic)
- Slack wire switches (pneumatic)
- Proportional remote control valve
- Air service units

Available options

- Marine / offshore coating systems
- Alternative drum lengths
- Drum pressure rollers
- Drum guards
- Drum locking pins

A range of ultra compact lifting and pulling hydraulically driven winches specially designed for offshore applications or for any other hazardous environment where space is limited. The heavy duty planetary gearbox and brake are mounted within the drum core, which both saves space and protects from any external damage. Winches designed to meet independent third party requirements such as Lloyds, ABS, DNV, etc. These standard winches can be fitted with several options and accessories. The winches are manriding prepared. Adding specific options and reducing the WLL means that the winch can be used for manriding applications too. Winches are supplied without a control valve as standard, however, they do have a single acting shuttle valve.

Standard features

- OHW: utility lifting
- OHR: manriding prepared
- Heavy duty integrated planetary gearbox integrated.
- Fixed displacement axial tapered piston motor (Rexroth A2FE series)
- Steel drum, length 610 mm with cable fixing point at flange
- Two drum supports
- Standard temperature range -10° to 50°C.
- Oil bath disc brake
- Lifting lugs
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 1023
- FEM / ISO class: T4-L3-M5

- Drum pressure rollers
- Drum locking pins
- Band brakes (manual or automatic fail-safe)
- Drum guards
- Drum dividers
- Spooling gears
- Grooved drums
- Tubular offshore frame construction
- Manriding package

Available control options

- Proportional control valves
- Load limiters
- Limit switches (electric)
- Slack wire switches (electric)
- Proportional remote control valve
- HPU's

Available options

- Marine / offshore coating systems
- Alternative drum lengths

Designed to the standards issued by the classification bodies and it meets the UK HSE regulations for personnel lifting operations on offshore installations. The winches are dedicated personnel lifting winches supplied with full material traceability. They have passed EC testing for these applications, i.e., both the winches and their technical files are in compliance with the requirements of the EC Machinery Directives.

The MR 30 FL winches have been specially designed for personnel lifting applications in which a safety harness or a boatswain's chair is used on fixed installations with a total WLL of 150 kg.

The MR 30 FGL winches have passed EC testing for these applications, i.e., both the winches can be supplied with a Lloyds Register of Shipping (LRS), ABS or DNV Design Appraisal Certificate.

The MR 50 FL and MR 60 FL have been designed for use with assemblies using a platform, basket, carrier, etc, with a total WLL of 500 kg for the MR 50 FL and 1000 kg for the MR 60 FL.

Standard features

- Helical shaft mounted gearbox, life lubricated with synthetic oil
- UK HSE compliance
- Caliper primary brake 180% of WLL
- Automatic band brake as secondary drum acting brake 180% of WLL
- Pneumatic gearmotor
- Orbit hydraulic motor
- Helical grooved steel drum
- Full material traceability (3.1 - EN 10204) on load-bearing parts
- Two drum supports
- Limit switch
- Slack wire switch
- Overload protection device
- Local proportional control with biased control valve (pneumatic models only)
- Local proportional control with biased control valve (MR 30 FLP/FLV only)
- Drum guard
- Mufflers (on MR 30), 50 en 60 FLG

- Air service unit (pneumatic models only)
- Main air emergency stop valve
- Operating conditions -20°C to 50°C
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 1023
- FEM / ISO class: T4-L3-M5
- Emergency lowering accumulator
- ABS PDA approved

Available options

- Electric versions
- Alternative speeds
- Alternative drum dimensions
- Operating conditions -45°C to 50°C

Available control options

- Electric/hydraulic or pneumatic control systems
- Pneumatic pendant remote control on portable pedestal
- Pneumatic pendant remote control with shoulder harness

A range of standard pneumatic winches with high efficiency gearbox, developed for heavy duty pulling and lifting duties up to 2,700 kg. This broad range comprises a variation of very compact winches with vane or gear motors. Drum lengths can easily be adapted to the customers request.

Standard features

- High efficiency transmission
- A series: right angle helical gearbox
- F series: in line helical gearbox
- A/F LV: Rotary vane motor
- A/F GP: Contact less maintenance free gear motor
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 1023
- Automatic disc brake
- Lever operated proportional control valve
- FEM / ISO class: T3-L3-M4

Available options

- Offshore three layer 2 component conservation
- Alternative drum lengths
- Drum pressure rollers
- Band brakes (manual or automatic failsafe)
- Manual disengaging clutches
- Drum guards
- Drum dividers
- Spooling gears
- Grooved drums

Available control options

- Emergency main shut off valves
- Load limiters
- Limit switches (pneumatic)
- Slack wire switches (pneumatic)
- Proportional remote control valve
- Air service units

This standard range of the SRM type mooring/anchor winches is designed for application on jack-up rigs, barges and other offshore or marine units. These standard winches can be fitted with several options such as free spooling clutches and spooling gears. Also a range of mooring accessories can be offered with these winches such as fairleads, sheaves, wire rope and load measuring equipment. Winches will be subject to our standard internal test procedure, which can be witnessed by the client and/or third party.

Standard winch features

- Heavy duty slew ring
- Heavy duty planetary gearboxes fitted with pinions
- SRM E; IP 56 TENV seawater-resistant 400 - 440 V AC / 3-phases / 50 - 60 Hz braked motors.
- SRM H; radial piston type hydraulic motors complete with brake valve
- Steel drum with cable fixing point at flange
- Band brake (manual)
- Two drum supports
- Lifting lugs
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 1023
- FEM / ISO class: T3-L3-M4

Available control options

- Control box IP 55 with push-buttons and emergency stop
- Control box IP 66 with low voltage IP 65 remote control
- Load limiter
- Frequency inverter for variable speed control
- Load and/or line monitoring
- Proportional local or remote control valve (pneumatic or hydraulic)

Available mooring equipment

- Horizontal deck sheaves without or with load pins
- Swivel fairleads
- 4, 6, 7 or 10 roller fairleads
- Deck bollards and chocks

Available winch options

- Automatic band brakes
- Alternative speeds
- Alternative supply voltages
- Drum guards
- Spooling gears

Winches for Renewable power sources

Renewables cover a wide spectrum of technologies, ranging from PV, hydro energy, wind and tidal generator systems. Constructing these power generating plants, EMCÉ lifting and positioning equipment plays an important role. In some applications EMCÉ winches are even a crucial part of the system itself as in kite driven generator systems or auxiliary propulsion kite systems for shipping applications. In most cases however the EMCÉ equipment is used for construction, installation and maintenance purposes. For some specific tasks, such as for cable pull up duties, the winches or capstans are available with special capabilities:

Typical applications

- Lifting equipment for construction of wind turbines
- Tool hoists for wind turbine applications
- Generator kite winches
- Ship pulling kite winches
- Positioning winches for tidal energy barges
- Man riding inspection winches for hydro powerplant supply tubes
- DNVGL-ST E272 Hose reels for sea water driven pile driving equipment for wind turbine foundation
- Cable pull-in winches for pulling off shore wind turbine cables (inter-array/export)
- Safety door winches for hydro power plants

Specific options

- Very accurate load measuring by means of a single load-shackle
- Load data storage value-date-time
- Data port for interface with client monitoring system
- Completely enclosed outer frame with insulated panels and heating inside for long term preservation in hostile environments
- Knock Down versions offering < 1000 kg single component weight for critical lifting or floor loading transport situations.
- Spooling gear for proper rope spooling with extreme fleet angles
- Rope speed and length measurement
- Double drum selections for steel and HMPE if required
- Remote control with HMI panel
- Suitable for use of HMPE rope
- Delivery with cable or rope pre-tensioned onto the drum

The winches and capstans in our “Renewables” series possess the same standard features of our Oil & Gas winches, and can also be executed with the same mechanical and control options.

AW winches are designed to position and hold accommodation and ship-to-shore ladders and ladders between vessels and offshore installations.

Constructed in accordance with ISO 7364 requirements for international shipping, the range features a dynamically and statically self-braking wormgear and emergency hand crank. Each type may be configured for single or twin rope operation and powered by means of an electric or pneumatic motor.

PW winches are used to lower and lift the pilot ladder on board of seagoing vessels, EMCE has one standard design, PW 550, that has been supplied to several dredging vessel fleet owners. We have also supplied custom-built designs. Please ask about the available options.

Standard features

- Self-braking wormgear transmission for the AW series
- Planetary gear for PW 550
- ISO 7364 compliance
- IP 56 TENV motor protection for the AW ES series
- IP 66 TENV with standstill heating for the PW 550
- Rotary vane, gear type air or motor for the AW LS series
- Steel drum (not grooved) with one or two cable fixing point(s) at flange
- Two drum supports
- Emergency hand crank for the AW series only
- Double layer 2-component conservation, colour RAL 5010
- 13 meter pilot ladder with 32 flat steps, 4 spreaders and 4 rubber steps for PW 550
- Pneumatic versions with hand control valve
- IP 66 spindle limit switch for PW 550
- FEM / ISO class: T3-L3-M4

Available options

- Band brake, manual or automatic fail-safe for the AW series
- Increased motor protection IP 68 TENV for the AW series
- Alternative supply voltages
- Grooved drum for AW series only
- Drum pressure roller for AW series only
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope anchors / etc.
- Drum guard for AW series only
- Marine / offshore coating systems
- Class witness certificates

Available control options

- Electric or pneumatic control systems
- Limit switches
- Load limiters

Wormgear capstans

Self-braking worm gear drives with electric, hydraulic or even pneumatic motor, available in on-deck or below-deck build types. The on-deck drive is equipped with a waterproof motor for intermittent use. The below-deck drive is equipped with a dripwater-proof motor and a mounting plate with an extra self aligning bearing suitable for high static loads such as with mooring ropes. Pneumatic drives are available upon request.

Planetary capstans

Featuring a cast iron capstan head mounted on a heavy duty planetary gearbox. The entire drive is mounted in a watertight tube frame providing optimal protection from the elements. Pneumatic drives are available upon request. Capstans up to 20 tons can be offered upon request.

Standard features

- Heavy duty wormgear or planetary gearbox
- IP 54 braked motor 400 VAC / 3-phases / 50 Hz for planetary capstans
- IP 56 TENV cast iron 400 V AC / 3-phase / 50 Hz non-braked motor for on-deck wormgear capstans
- IP 54 400 V AC / 3 phases / 50 Hz non-braked motor for under-deck wormgear capstans
- Single speed and one direction only (electric capstans only)
- Orbit or radial piston type hydraulic motor
- Vertical cast iron warping head according to ISO 6482
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 5010

Available options

- Cast iron motor for planetary capstans
- Explosion proof motors
- Back stop bearing build in planetary gearbox for one direction (replaces brake)
- 2 speed motors
- Alternative speeds
- Alternative supply voltages
- Horizontal warping head configuration
- Marine / offshore coating systems

Available control options

- Control box IP 55 with IP 65 foot pedal (single speed, one direction) control built acc. to NEN 1010
- Control box IP 66 with IP 66 foot pedal (two speed, two directions) control built acc. to NEN 1010
- Frequency inverter and proportional foot pedal for variable speed control
- Proportional local or remote control valve (pneumatic or hydraulic)
- Pneumatic drive

This series of windlasses has been especially designed for intensive use and therefore has a robust construction. All windlasses are designed with a self-braking gearbox (except P 1000 H and P 1600 H) which will save the costs of an expensive brake motor.

The band brakes are lined with a ferrodo (non-asbestos) friction material.

Standard features

- Heavy duty worm gearbox or planetary/ worm gear combination
- IP 56 TENV cast iron 400 V AC / 3 phases / 50 Hz non-braking motor with torque knob
- Orbit type hydraulic motor
- Suitable for 10 – 28 mm DIN / Studlink chain sizes from 12.5 – 28 mm
- Free-fall clutch
- Band brake
- Horizontal cast iron warping head
- Three layer 2-component conservation according ISO 12944 category C4-High, colour RAL 5010

Available options

- Double executions possible for W 120 up to W 600
- Alternative supply voltages
- Full manual control by means of hand wheel
- Horizontal warping head configuration
- Remotely controlled band brakes
- Classification certificate from any recognised marine classification body
- Special marine / offshore coating systems

Available control options

- IP 66 control box with IP 65 pendant remote control or push-buttons built acc. to NEN 1010
- Proportional local or remote control valve

This system is used for offshore diving applications. The maximum lowering capacity is 90 metres so it can be used for offshore platform diving operations as well. It consists of an A-frame with 2 approved manriding winches and a redundant electrically driven hydraulic power unit. All fit a 20" standard size container; even 2 of DLR-1250 will fit in one 20" container. One winch is used to lift and lower the dive bell, while the other for the clump weight; a third optional winch can be used as a utility/tool winch. The function of the clump weight is to keep the dive bell straight and steady under water. In case of an emergency or breakdown of the wet bell winch, the clump weight winch will be able to lift the dive bell and clump weight together.

Designed to fulfil the requirements of Lloyds and it also meets the UK HSE regulations for personnel lifting operations on offshore installations. The winches and A-frame are especially made for personnel lifting suitable for diving operations and offered with a Lloyds Register of Shipping (LRS) Design Appraisal Certificate and full material traceability. They have passed EC testing for these applications, i.e., both the winches and their technical files are in compliance with the requirements of the EC Machinery Directives. The DLR-1250 model also complies with IMCA regulations and comes with an ATEX certificate.

Standard features

- Compact units with minimal deck space usage
- Suitable for Sea state 2-3
- Easily rigged and set up
- Main diving bell winch OHR 1.5, WLL 1250 kg @ 40 m/min
- Clump weight winch OHR 1.5, WLL 1250 kg @ 40 m/min
- Limit switches for upper limit
- Double fail-safe braking on both winches
- Lifting height (lowering depth) 90 metres
- Utility winch 500 kg @ 25 m/min. (optional)
- Fleet angle compensators for winches
- Power supply: 380-460 V AC, 50/60 Hz
- Hydraulic cylinders for deploying the A-frame (optional)
- Forklift pockets for easy handling
- Container sockets for easy fastening
- Welding brackets for deck mounting
- Readout unit of paid-out wire rope
- HPU Eexd ATEX, 100 l/min. @ 180 bar, redundant pump system and cross-over manifold and quick release connections
- Hydraulic proportional valves for winches and A-frame operation
- Operating conditions -20°C to 50°C
- Full material traceability (3.1 - EN 10204) on load-bearing parts
- Easy transportation because it fits a standard 20" container size
- Fitted with twist-free wire ropes with high (10x) safety factors
- IMCA and Lloyds compliant
- Flood light, Eexd
- Standard open basket with bottle mounting bracket, fall-out prevention, pay load 650 kg
- Clump weight: 400 kg
- Dimensions; operational 2976 x 2502 x 4017 mm, collapsed 4558 x 2178 x 1111 mm
- Weight excl. HPU; 2750 kg.

For more specific details please send us or one of our authorised dealers your inquiry.

Hose reel, umbilical or transponder winches are mainly built for purpose. Winches are built to order and can be executed with a self-braking wormgear or planetary gear, depending on the load required. The drive can be either electric, hydraulic or pneumatic. The hose reels are mainly used to reel hoses for fresh water supply, MDO fuel supply and hydraulic oil or to reel electrical power supply cables.

The umbilical winches are, generally, used to reel a combination of hoses, signal cables, coax or even fibre optic cables. Most of them come with slip rings and/or rotating swivels. Transponder winches used for powered transponders are mainly used with electrical signal cables and have, in most cases, an electrical slip ring mounted. Winches can be supplied complete with an A-frame if required.

EMCÉ has supplied systems for all applications including reels with 6" stainless steel swivels or slip rings for high voltage. The versions we have supplied can be found on the following type of constructions: offshore heavy lift vessels, offshore semi-sub, diving support vessels, research vessels, cable and pipe laying vessels and offshore pile-driving barges.

Standard features:

- Self-braking wormgear, helical bevel, planetary or slew gear transmissions
- IP 56 TENV 400 V AC / 3 phases / 50 Hz braked motors (or 440/3/60)
- Radial piston air or hydraulic motors
- Heavy duty construction
- Double layer 2-component conservation according ISO 12944 category C2-Low, colour RAL 5010
- Stainless steel slip rings (fibre optic or elec.)
- Stainless steel swivels
- Spooling devices

Available options:

- Explosion-proof electric motors
- Protective steel motor covers
- Alternative speeds
- Protective guards
- Available control options:
 - Control box IP 55 with push-buttons and emergency stop built acc. to NEN 1010
 - Control box IP 66 with low-voltage IP 65 remote control built acc. to NEN 1010
 - Load limiters
 - Frequency inverters for variable speed control
 - Wireless radio remote control systems
 - Limit switches
 - Pneumatic and hydraulic control systems

Transponder winch

Winch enquiry checklist

The first step in designing the right winch for a given application is to collect all relevant data. This can be done in a face to face or telephone conversation, but the most convenient and secure manner is by completing the below checklist and forward it by e-mail to the EMCÉ sales and engineering office. On the basis of the checklist further questions can be asked or a preliminary proposal formulated.

Company name : _____

Personal name : _____

Fax/tel./e-mail : _____

Latest bid date for offer : _____

Required delivery time : week _____ 200__

Short description of application : _____

Sketch of application available : no / yes, find enclosed

No. of winches : _____

Type (if known) : _____

Application : *lifting / pulling / traversing / traction /
pile-driving / anchoring / mooring*

**Working Load Limit
(WLL/SWL)** : _____ kg or daN _____ in 1st layer,
_____ in top layer

Speed : _____ m/min in _____ layer, fixed /
variable / 2-speed; _____ / _____ m/min.

Rope diameter : _____ mm

Rope length : _____ m in max. _____ layers

Drum dimensions (if known) : core diameter _____ mm, length _____ mm,
flange diameter _____ mm

Note: This is only a small selection from the more than 30,000 winches EMCÉ has supplied over the past 35 years. EMCÉ produces approximately 1300 custom winches and 400 standard winches each year. A more specific overview of our products can be obtained from the EMCÉ sales office.

Sales and service network

EMCÉ winches has a strong worldwide presence and takes great pride in her worldwide dealer network. In addition to our Voorhout Holland based factory team, the dealer network provides close commercial and technical support for our customers and their end-users with local knowledge. In addition, EMCÉ sales and support staff travel the world on a regular basis to meet and support customers and keep our dealer network up to speed regarding new technological developments.

Please check our EMCÉ website to find an EMCÉ dealer close to you, or simply contact the EMCÉ Voorhout office for contact details or direct advice.

EMCÉ winches historically has a strong presence in the petroleum industry. Even while other regions and other ways of producing oil are developing, the Middle East remains the heartland of oil production. To cater for the specific demand of the Middle Eastern region EMCÉ has a Kingdom of Bahrain based sales and support office to offer her commercial and technical services from inside the region to her customers and dealers in the region.

General terms and conditions

All tenders and contracts for deliveries by us inside and outside the Netherlands are governed by the sales and Delivery FME General Terms and Conditions for the mechanical and electrical industries of October 1998 filed under reference no. 119/1998 at the district court in The Hague.

Guarantee

EMCÉ guarantees that its winches are free of defects in material and workmanship for a period of one year from the date of purchase to the original user. EMCÉ will repair, without costs, any product found to be defective, including parts and labour charges, or, at its discretion, it will replace such products or refund the purchase price after deducting a reasonable allowance for depreciation, in exchange for the faulty product.

If any product proves defective within its original one year guarantee period, it should be returned to any authorised EMCÉ dealer: shipment should be prepaid and include proof of purchase and/or winch data sheet/test certificate.

This guarantee does not apply to products which EMCÉ has determined to have been misused or abused, improperly maintained by the purchaser, or where the malfunction or defect can be attributed to the use of non-genuine EMCÉ parts.

EMCÉ makes no other guarantee, and all implied guarantees including any guarantee of merchantability or fitness for a particular purpose are limited to the duration of the expressed guarantee period as set forth above. EMCÉ's maximum liability is limited to the purchase price of the product and in no event shall EMCÉ be liable for any consequential, indirect, incidental, or special damages of any nature arising from the sale or use of the product, whether based on contract, tort, or otherwise.

Stokvis Group

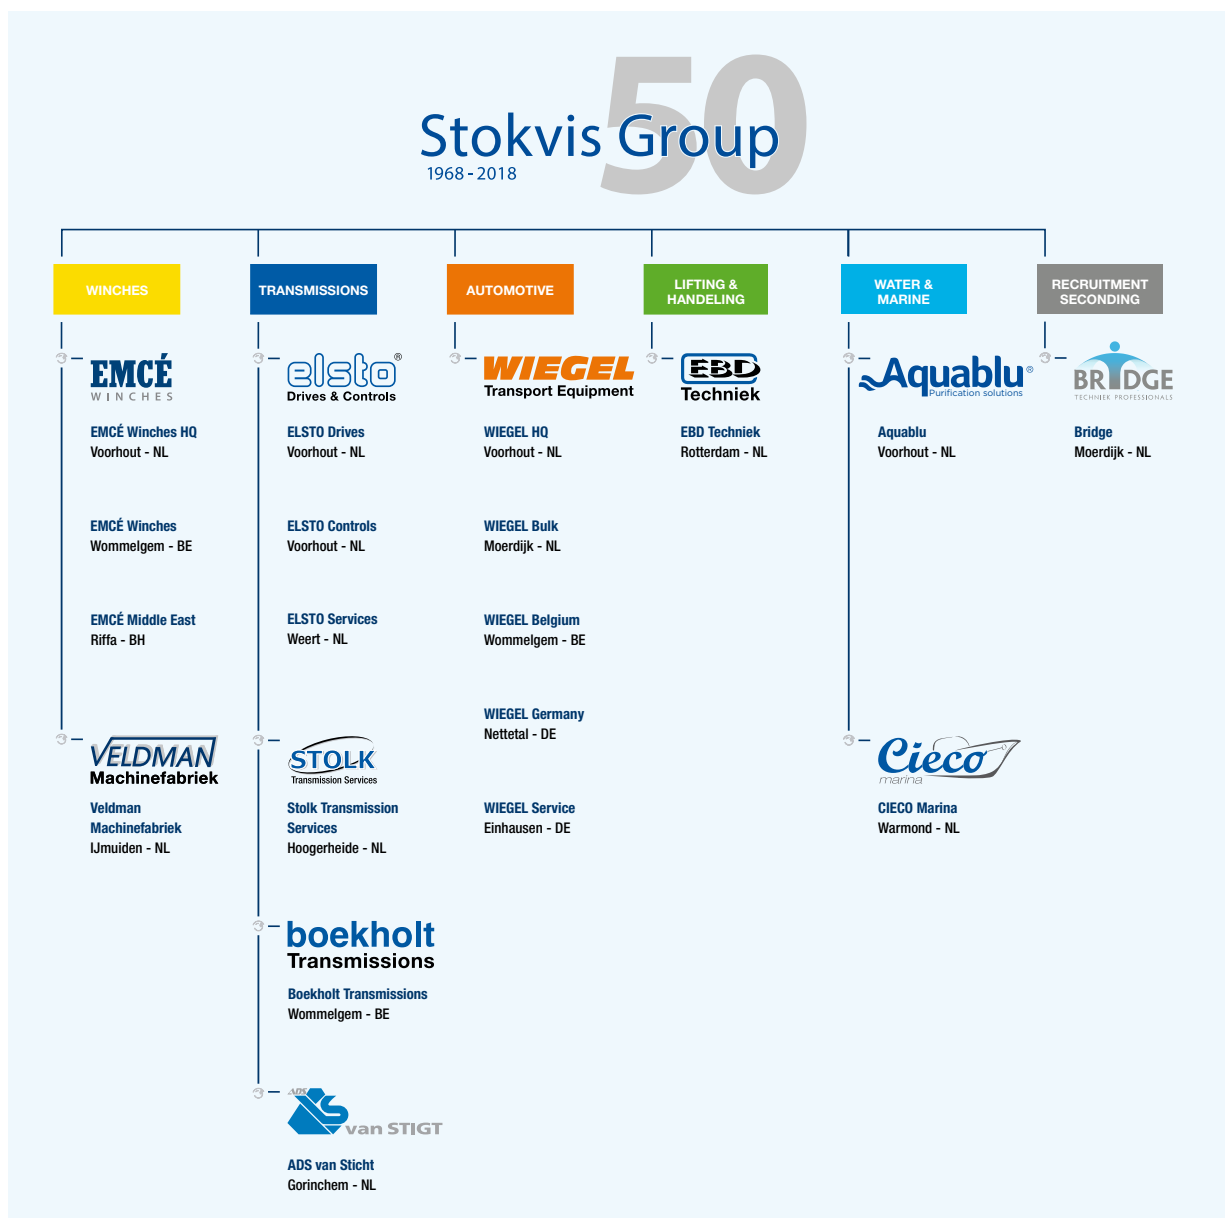

The Stokvis Group is a trading and manufacturing organisation with its headquarters in Voorhout, a rural town 25 minutes away from Schiphol Amsterdam Airport.

The company's presence does not limit itself to her branches in the Netherlands, Germany, Belgium and Bahrain, but through her products is present all over the world.

The group started now over 50 years ago trading in electric motors, but through autonomous growth and careful acquisitions the group now covers a wide field of competence in several disciplines, operating on both the Dutch and international markets.

Currently employing over 350 staff, the Stokvis Group is active in the following fields:

- Drive and control technology
- Design and construction of winches
- Horizontal and vertical transport solutions
- Automotive and Truck equipment
- MRO services for equipment and installations
- Advanced water treatment equipment
- Products and services for the international yachting market
- Recruitment and Staffing services.
