ETT STARKT VAL NÄR DET GÄLLER LYFT- OCH MATERIALHANTERING

HTS introduces the newly designed ECO-Skate® ISOCONflex XL container moving system. The versatile ECO-Skate® ISOCONflex XL skate system is ideal for moving ISO containers, even in tight spaces. Whether you need to lift and set from the front or the side of the container, the compact wheel boxes take less space than the typical container skate. With the ISO container fully loaded, the compact wheel boxes can be individually turned 90° to move the container sideways, without the need to lift and reset the skates. With detachable alignment bars and pulling handles, the ECO-Skate® ISOCONflex XL is compact and stores away nicely, taking up less room in your facility.

Rotation of the single wheel boxes

With bolts the steerable skate becomes a fixed rear skate
